

INDULINE SOFTLINE-FEELING

A variety of possibilities for decorating wood/aluminium windows and doors

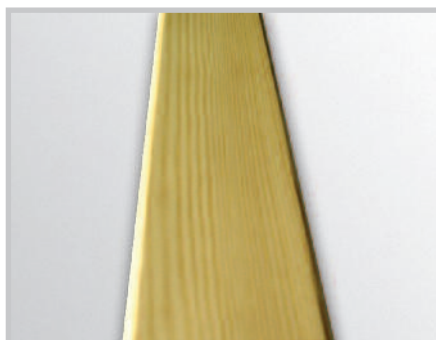

Coating with Induline LW-720

Bonded wood/aluminium constructions are becoming more and more popular. By producing surfaces with a furniture-like appearance, much more justice is done to the aesthetic advantages of wood as a working material compared to conventional wood window treatment.

However, even if the coating is not exposed to weather in outdoor areas, it should effectively protect the dimensional stability of the window:

Induline LW-720 was developed especially with this requirement in mind. Even though Induline LW-720 looks like a high quality furniture varnish, it has all the advantages of a good window coating. Induline LW-720 is water vapour diffusion open and highly elastic.

Because of its softline feeling effect, Induline LW-720 even feels like high quality furniture.

Conventional, clear window stains have an obvious yellow tinge on soft wood (inherent colour of the binder).

Induline LW-720 produces a real soft wood look: The natural shade of colour of soft wood is not changed by the coating.

Properties:

- Water based, intermediate and finishing coat
- Prevents emphasis/yellowing of the wood substrate
- Contains highly transparent UV absorbers
- Tested according to DIN EN 71-3 (Safety for toys)
- Softline feeling: surfaces feel like high quality varnished furniture - the window becomes a show piece
- Induline LW-720/10 matt - with an oiled look
- Induline LW-720/40 silk matt
