

REFERENCE

Stone Carpet Driveway, Private Residence, Derbyshire

Application Field

- Floor coating –decorative systems

Structure Type

- Single/two family homes

Brief Description

A resin bound Stone Carpet was installed to 200m² of private residential driveway and a number of pathways surrounding the property.

Main Problem and Requirements

The Client required an alternative external flooring system to the usual tar macadam surfacing.

Remmers Stone Carpet was selected to compliment the rendered finish on this prestigious property and because of its hard wearing qualities.

An aliphatic polyurethane binder was also required for protection against exposure to UV light. PUR UV 100 was used as a fully stable binder for outside use where UV stability and flexibility are required.

The system was installed on 14 day old concrete with a high moisture content in chilly October weather!
